

# DON'T MOVE FIREWOOD

Don't transport invasive species. Always use local or certified heat-treated firewood.

## Invasive tree-killing pests can hitchhike in your firewood.

Forest insects and diseases kill thousands of trees every day. Keep your backyard and other favorite places safe from these insects and diseases by leaving firewood at home.

To find local firewood visit:  
[www.maine.gov/firewood](http://www.maine.gov/firewood)

Leave firewood at home.

Buy certified heat-treated firewood or collect (if allowed) only what you'll use.

If you have already moved firewood, use it immediately.
